SUMMARY

Software Engineer and Development Lead with 4+ years of experience building production software, modernizing complex enterprise workflows, and owning features from ambiguous requirements through design, implementation, testing, rollout, and support. Experienced in backend systems, full-stack product development, data pipelines, and applied AI/LLM agents. Strong customer-facing communicator who turns real operational pain points into reliable, usable software and ramps quickly across large codebases.

EXPERIENCE

Sun Net Inc.

July 2021 – Present

Software Engineer / Development Lead

San Jose, CA

- Served as development lead for 2.5 years, owning high-impact product and platform work end to end across discovery, technical design, implementation, testing, production rollout, and ongoing support.
- Led digital transformation initiatives for multiple large utility customers, working directly with operators and business stakeholders to convert vague, manual processes into organized software workflows that made work faster and easier.
- Currently lead delivery of a new solution supporting the UWPC Code in the Canadian grid, coordinating requirements and execution across customer stakeholders, engineering, and production teams.
- Architected a central entity-linking system that decoupled 5 intertwined modules into composable components, improving maintainability and standardizing associations and navigation across the platform.
- Designed and shipped a workflow module that reduced customer effort by 80%+; added profiling, logging, and analysis capabilities to improve debugging, performance investigation, and operational visibility.
- Applied LLM and RAG concepts to translate customer requirements and domain rules into structured engineering outputs; mentored junior engineers through code reviews, pair programming, and design guidance.

Commonwealth Care Alliance

May 2019 – May 2021

Application Developer Intern & Part-time

Boston, MA

- Designed backend services for a public Provider Directory using the .NET Framework and integrated Google Maps APIs for search and location-based experiences.
- Built an end-to-end data pipeline to ingest cybersecurity vendor data, store it on-premises, and load it into BigQuery for downstream analytics and reporting.
- Created Looker dashboards that gave executive stakeholders a centralized view of company-wide security standards and operational metrics.

PROJECTS

Reagent – Git-Native Coding Agent | *Python, AI Agents, Git*

Open Source

- Contributed to a Git-native coding agent designed to reason over repositories and support codebase-aware engineering workflows, emphasizing structured context, tool use, and iterative execution.

HealthVA – Routed Diet & Workout Agent | *Python, LangChain, Gradio, Postgres/SQLite*

2026

- Built a routed health agent with diet and workout specialists, per-user memory, domain-scoped tools, grounding enforcement, audit logging, and database-backed profile isolation.

DietVA – Local Diet Planning Agent | *Python, LangChain/LangGraph, Gradio, SQLite*

2025

- Built a local conversational agent with swappable model backends, tool-backed workflows, structured logging, retrieval over local datasets, and guardrails for reliable behavior.

EDUCATION

San Jose State University

San Jose, CA

M.S. in Artificial Intelligence

Expected 2026

California State Polytechnic University, Pomona

Pomona, CA

B.S. in Computer Science; Minor in Entrepreneurship; GPA: 3.78/4.00, Dean's List

May 2021

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C#, SQL, HTML/CSS/SCSS

Backend & Data: Spring, Hibernate, REST APIs, .NET Framework, Node.js, ETL, batch processing, data modeling, MySQL, SQL Server, Oracle, SQLite, BigQuery

AI & Product: LLM applications, RAG, AI agents, LangChain/LangGraph, prompt design, PyTorch, pandas, NumPy, Gradio

Frontend & Tools: React, Git, Docker, GCP, Looker, testing, observability, production support, code reviews, mentorship
